

Stromtank S 5000 High Power

Independent Power Source

Made in Germany

Upgrade your listening pleasure

Audiophiles are always looking for clean, undisturbed grid power to achieve the next level of music quality with their AUDIO + VIDEO systems.

One of the most important facts to hear the excellent quality of your components is the purity and stability of the grid signal. Daily routine equipment like internet over powerline, microwave or modern energy saving lamps influence the grid. Everyone is connected to the same dirty grid polluted with DC voltage, high level and frequencies. All interferences manipulate audio and video quality and even the best power conditioners are not able to eliminate all disturbances.

Some Audiophiles are waiting until deep in the night for a less-disturbed AC-grid to get good sound.

Don't wait until midnight to get the best sound!

The Stromtank offers the unique possibility to separate audio and video systems completely from the grid. Stromtank is an innovative battery array with state-of-the-art LiFePO₄-technology: long cycle life, absolute safe and excellent high temperature achievements. The Stromtank S 5000 HP (high-power) offers top performances of more than 5.000 W for most ambitious setups. It is even possible to use several units for very complex setups to achieve outstanding results.

Enjoy your listening delight for many hours before Stromtank connects uninterrupted and automatically with the grid to recharge.

The perfect addition for your audio & video setup

During a recharging process you can watch and listen without any interruptions. Even when the Stromtank is connected to the grid, the current pulses are not taken directly from the grid - they are absorbed by the battery. In the AC-connected mode the Stromtank creates a stable AC-supply (amplitude and frequency) and has less interaction between the grid and your audio- / video-setup.

The quality of premium home theatre equipment is improved both visually and sonically with the Stromtank.

Technology	LiFePo4 battery array with active BMS (battery Management System) for long cycle life
Storage capacity	5.000 Wh
Output voltage	100 - 130 Vac / 200 - 245 Vac
Output power	1.500 W
Top performance	> 5.000 W
Converter	2 converters operating parallel
Dimensions (w x h x d)	48 x 58 x 59 cm 19 x 22.8 x 23.3 inches
Weight	130kg 286 lbs

For more technical specifications please ask for data sheet.

Handcrafted with passion

The creator of this audio-declaration of independence is Wolfgang Meletzky – designer and founder of high-end reference components.

Stromtank – “made in Germany” – was developed in our Berlin factory. Stromtank High-power is manufactured and assembled with noble and handpicked components.
