

Stromtank S-1000

independent power source

Made in Germany 

THE consequent way to natural sound

Today's AC power lines are affected by countless active electricity consumers, which leads to a high load and considerable pollution of the electricity.

When AC noise trickles into the critical components of an audio system, low signals are faded out and performance is affected. This low-level content is critical as it conveys the critical overtones and environmental conditions in audio and depth and clarity in videos.

Under these circumstances nobody exhausts the real full potential of his high-end audio system and is looking for clean, undisturbed grid power to achieve the next level of music quality.

Audiophiles are waiting until deep in the night for a less-disturbed AC-grid to get good sound. Don't wait until midnight to get the best sound!

Total isolation

One of the most important facts to hear the excellent quality of your audio-components is the purity and stability of the grid signal.

Stromtank offers the unique possibility to separate your Hifi-system completely from the grid: a high-power battery pack with integrated pure-sine wave converter ensures pure sinus signal and AC-voltage with crystal controlled frequency.

The perfect addition for your audio-setup

During the recharging process you can listen without any interruption. Even when the Stromtank is connected to the grid, the current pulses are not taken directly from the grid - they are absorbed by the battery. In the AC-connected mode the Stromtank creates a stable AC-supply (amplitude and frequency) and has less interaction between the grid and your audio- / video-setup.

Stromtank S-1000 is primary designed for front-end components and creates a stable AC-supply (amplitude and frequency) and has less interaction between the grid and your audio-/video-setup.

STROMTANK – that's the power foundation that lifts up your system!

Technology	Computer controlled lithium-iron-phosphate battery array (LiFePO4) for long life
Storage capacity	1000 Wh
Output voltage	100 – 130 Vac / 200 - 245 Vac
Output power	450 VA
Dimensions (w x h x d)	48 x 22 x 47 cm 19 x 9 x 19 inches
Weight	41 kg 90 lbs

For more technical specifications please ask for data sheet.

Handcrafted with passion

The creator of this audio-declaration of independence is Wolfgang Meletzky – designer of high-end reference components.

Stromtank – “made in Germany” – was developed in our Berlin factory. The tank is manufactured and assembled with noble and handpicked components.
